

RenWeb Integration

Getting started in Curriculum Trak is very easy, and the process is extremely efficient for RenWeb schools. As a RenWeb school, you click 2 buttons: one to pull in all your teachers and one to pull in all your courses and schedules. That's it! The whole process takes just minutes for a RenWeb school. To see a video on this process, [click here](#).

As a Curriculum Trak client, we work with you to get your desired standards and benchmarks uploaded as part of your setup fee. We currently have most of the national, state and international standards, and continue to add standards on an as-needed basis. Once your desired standards are in Curriculum Trak, you can click a button to have those same standards pushed into RenWeb.

Finally, Curriculum Trak has a lesson planning tool that is directly tied to the units found in your school's Curriculum Trak maps. This easy-to-use tool is comprehensive and provides many useful reports for teachers and administrators. If you choose to use the Lesson Planner add-on module in Curriculum Trak, you can also use the integration we have between Curriculum Trak's lesson planner and the RenWeb lesson planner. This tool automatically moves your teachers' lessons plan content, including homework and assignments, from Curriculum Trak into RenWeb. This will allow your parents to view content in Parents Web and other RenWeb mobile tools with one single entry of data by your teachers. To see a video on this process, [click here](#).

If you would like to learn more about Curriculum Trak as a product, we recommend that you watch our [demo video](#).
